

# Don't Nix it.

# FIX IT!

**Reasonable Repairs May Be Better for YOU than  
Buying a Cheaper New Product.**

## **Don't Be a Part of the Environmental Problem**

When you repair your home electronics product, you are helping to protect your environment. Discarded products wind up in the landfill. The lead and other toxins poison the ground, and pose serious health and environmental problems for your descendants.

Besides, the item you now have may be better built, and offer more features than the heavily advertised stripped-down models.

**Consult with your trusted service dealer about your best options.**
